产品的初始设置方法

准备

打印状态表

打开打印机的电源。然后,长按按钮不少于3秒钟,即可打印出状态表。在状态表上可确认连接网 络时所需的设置值(IP地址、子网掩码、网关地址)。

连接打印机

按照您在状态表上确认的网络设置值,对主机进行设置。

通过输入Ping命令, 可检查是否已正确连接打印机。

例: ping 192.168.192.168

示例中使用了"192.168.192.168"作为IP地址。但是,实际设置时,请使用状态表中的IP地址。 所有打印机的默认IP地址为同一地址。因此,每次接通电源后,仅可配置一个打印机。

将产品恢复为出厂默认设置

在打开打印机电源的同时,长按接口卡上的按钮,直到打印出开始初始化的信息。所有内部设置将 恢复为出厂默认设置。

☜ 备注:

请勿将无线LAN组件之外的设备连接到USB Type A接口。

初始设置的方法有两种。关于详细内容,请参阅UB-EO4的《Technical Reference Guide》(技术 参考指南)。

□使用Web浏览器

- 1. 将本产品的IP地址输入浏览器的地址栏后,按下回车键。
- (例: http://192.168.192.168 [默认值])。
- 2. 在用户身份验证画面上的[用户]栏中输入"epson",在[密码]栏中输入打印机本体的区 分大小写的10位序列号(默认值)。
 - [用户] 固定为 "epson",但可变更 [密码]。 我们建议从缺省设置更改初始管理员密码。
- 3. 设置各菜单的参数。如有参数发生变更,按下[发送]按钮,即可将该设置内容发送至打印 机。
- 4. 发送设置内容后, 画面将切换。按下[重置]按钮, 即可启用该设置内容。如果变更了IP地址 等,需确认主机的设置内容与打印机一致。

Key to Symbols

The symbols in this manual are identified by their level of importance, as defined below. Read the following carefully before handling the product.

\triangle CAUTION:

Cautions must be observed to avoid minor injury to yourself, damage to your equipment, or loss of data.

Notes have important information and useful tips on the operation of your equipment.

Cautions on Handling

CAUTION:

Do not put the product in low temperatures or in a dusty environment.

Use and store the product properly in order to prevent malfunctions or damage (such as damage from rodents or liquid) due to improper usage or storage.

Features and Functions

☐ Protocols: TCP, UDP, ICMP, IP, LP/LPR, TCP socket port

☐ Communication standard: 10BASE-T/100BASE-TX, Full duplex/half duplex

Part Names

- ① Ethernet connector
- ② USB Type-A connector
- 3 Push button
- 4 LED (green)
- (5) LED (yellow)

Do not connect any equipment other than the Wireless LAN unit to the USB Type-A connector.

Printer settings

If the TM printer has a memory switch or a dip switch for "#25 pin reset signal" or "#31 pin reset signal" setting, do not change the setting from Enable. Changing the setting may result in the printer to stop

Switch and function names may vary depending on the printer. For details, see the Technical Reference Guide of the printer.

Do not remove the interface board from or install the interface board into TM printer. Doing so may cause malfunction of the printer or the interface board.

Connecting the Cables

- 1. Make sure both the printer and the host computer are turned off.
- 2. Plug the Ethernet cable securely into the UB-E04's Ethernet connector until you feel it click.

Do not connect a telephone line, a display module cable, or a drawer kick cable to the Ethernet connector.

When the UB-E04 is installed, a customer display connector on the TM printer cannot be used.

3. Connect the power supply cable to the printer.

How to Set Up the Product

Preparation

Printing a Status Sheet

Power on the printer. Then, hold down the push button for more than 3 seconds to print a status sheet. You can check setting values necessary (IP address, Subnet mask, Gateway address) for the network connection.

Set the setting of the host PC to match the network setting that you have confirmed with the status sheet. You can check whether the connection to the printer has been correctly done by inputting the ping command.

Example: ping 192.168.192.168

Although the example shows the address 192.168,192.168, use whatever IP address is reported on the status

Because the default IP addresses for all the printers are the same, you should power on and configure only one printer at a time.

Resetting the product to Factory Defaults

Hold down the push button on the interface card while turning on printer power and continue to hold it down until a message that initialization starts is printed. This causes all internal settings to return to their factory defaults.

Setup

There are two ways for the setup. For details, see the UB-E04 Technical Reference Guide.

☐ Using a Web browser

- 1. Input the IP address of this product in the address bar of the browser and press Enter.
- (Example: http://192.168.192.168 [default]).
- 2. In the User authentication screen, enter "epson" for [user] and the printer serial number (10 digits, casesensitive) for [password]. (default)
- * [user] is fixed to "epson" but you may change [password].
 We recommend changing the initial administrator password from the default setting.
- 3. Set parameters in each menu. If a parameter is changed, press [Send] to send settings to the printer. 4. In the screen displayed after sending settings, press [Reset] to enable settings. When changing the IP
- address, etc., make sure settings in the host PC match that of the printer.
- ☐ Using the EpsonNet Config (Ver. 4.5.7 or later)

The EpsonNet Config is a utility to make network settings on an Epson printer with an Ethernet interface or a wireless LAN interface.

You can download the Technical Reference Guide and the EpsonNet Config from one of the following URLs. https://www.epson.com/support/ For customers in North America:
