## 1 Overview

This document describes the Epson drivers based on UPOS standard.  
The drivers available for fiscal printers are:

- JAVA POS driver
- POS for .net driver
- OPOS driver

Both drivers implement the following classes:

- line-display
- cash-drawer
- fiscal-printer
- electronic-journal

Epson fiscal printer driver project is based on a common source code which generates different output: Java-POS driver, POS for .net driver and OPOS driver.

## 2 Capability

The driver is compliant to the standard UPOS ver. 1.13 for the 4 classes supported with the following capability:

### General

CapPowerReporting	TRUE = PR_STANDARD ( from V28)
CapStatisticsReporting	FALSE
CapUpdateStatistics	FALSE

### Notes from V28:

**CapPowerReporting** = PR\_STANDARD (only for FiscalPrinter)

**PowerNotify** = it is possible to set only for FiscalPrinter, this is possible because CapPowerReporting = PR\_STANDARD

**PowerState** = it can be:

- PS\_UNKNOWN (if FiscalPrinter is disabled or if PowerNotify is PN\_DISABLED),
- PS\_ONLINE (if FiscalPrinter is enabled, if PowerNotify is PN\_ENABLED and if the printer does not reply to the polling)
- PS\_OFF\_OFFLINE (if FiscalPrinter is enabled, if PowerNotify is PN\_ENABLED and if the printer does not reply to the polling).

**StatusUpdateEvent** = added the following events: SUE\_POWER\_ONLINE and SUE\_POWER\_OFF\_OFFLINE (only for FiscalPrinter)

**line-display**

BlinkRate	ILLEGAL
CapBitmap	FALSE
CapBlink	NO-BLINK
CapBlinkRate	FALSE
CapBrightness	FALSE

## 4 Configuration file

Both driver Java POS, POS for .net and OPOS need the configuration file called `jpos.XML`.

Following is reported the setting which has to be defined in the configuration file.

```
<JposEntries>
  <JposEntry logicalName="linedisplay.0">
    <creation factoryClass="epson.epsonServiceInstanceFactory"
    serviceClass="epson.lineDisplay.lineDisplayService" />
    <vendor name="Epson" url="http://www.epson.it" />
    <jpos category="LineDisplay" version="1.11" />
    <product description="Line Display" name="Epson LineDisplay" url="" />

</JposEntry>

```

The communication setting parameters must be the same for all the 4 devices (Line display, cash drawer, fiscal printer and electronic journal). All of them share the same serial/usb/tcp interface.

parameter	Possibile setting
portType	"C" (com), "U" (usb), "T" (tcp)
<b>COM</b>	
port	Linux OS: "/dev/ttyS0", "/dev/ttyS1", "/dev/ttyS2", "/dev/ttyS3", "/dev/ttyS4", "/dev/ttyS5" Windows OS "COMx (x is the number of serial port)
baudrate	"1200", "2400", "4800", "9600", "19200", "38400", "57600"
parity	"none", "odd", "even"
bits	"7", "8"
stopbits	"1", "2"
<b>USB</b>	
usbAddress	"0" (automatic detection of first usb address), "1", "2", ...
<b>TCP</b>	
ipAddress	The ip address (for ex. "192.168.0.250")

**Meaning of the parameters:**

<b>service</b>	<b>parameter</b>	<b>value</b>
line-display	<i>overridePrinter</i>	<i>true</i> = any commands sent to the display from the application software override the message generated from the printer. <i>false</i> = Any messages generate from the fiscal printer override the messages coming from the application software.
line-display	<i>printerCodePage</i>	Name of the Code Page to use (for ex. "Cp437" = MS_DOS United States,Australia,New Zealand,South Africa - "Cp737" = PC Greek - "Cp866" = PC Georgian)
cash-drawer	<i>capStatus</i>	<i>true</i> = enable the sensor OPEN/CLOSE in the cash drawer ( <i>CapStatus</i> = TRUE) <i>false</i> = disable the sensor of the cash drawer ( <i>CapStatus</i> = FALSE)
cash-drawer	<i>autoDrawerOpening</i>	<i>true</i> = enable the automatic drawer opening <i>false</i> = disable the automatic drawer opening
fiscal-printer	<i>ZDayTotal</i>	<i>false</i> = print the financial report before the daily closure <i>true</i> = do not print the financial report before the daily closure
fiscal-printer	<i>FixedPaymentLine</i>	<i>false</i> = the method <i>PrintRecTotal</i> accepts description in the payment line ( <i>CapPredefinedPaymentLines</i> = FALSE) <i>true</i> = the method <i>PrintRecTotal</i> accepts a reference or a reference+description in the payment line description. The fixed payment line can be 0,1,2,3,4,5,6,000,100,201,202,203,204,301 <sup>6</sup> or 0+descr., 1+descr., 2+descr., 3+descr., 4+descr., 5+descr., 6+descr., 000+descr., 100+descr., 201+descr., 202+descr., 203+descr., 204+descr., 301+descr. for example "3Non riscosso" ( <i>CapPredefinedPaymentLines</i> = TRUE, <i>PredefinedPaymentLines</i> = 0, 1, 2, 3, 4, 5, 6)
fiscal-printer	<i>pollStatus</i>	<i>true</i> = the driver manage a regular polling to the printer in order to generate event in case of changing of devices status. <i>false</i> = the driver does not manage the printer polling.
fiscal-printer	<i>CapSubtotal</i>	<i>true</i> = the printer is able to print out the SUB-TOTAL (FP90III, FP81II, FP90II, FP81 and FP90 from ver. 2.01). <i>false</i> = the printer is not able to print out SUB-TOTAL (only FP90 ver < 2.01). This setting is automatically overwritten based on the real capability of the printer.
fiscal-printer	<i>CapAdditionalLines</i>	<i>true</i> = the printer is able to manage this capability. <i>false</i> = the printer is not able to manage this capability This setting is automatically overwritten based on the real capability of the printer. (FP90III, FP90II,

<sup>6</sup> 0 = CONTANTE, 1 = ASSEGNO, 2 = CARTA di CREDITO, 3 = TICKET, 4 = CREDITO, 5 = ALTRO PAGAMENTO, 6 = BANCOMAT, 000 = CONTANTE, 100 = ASSEGNO, 201 = CARTA di CREDITO, 202 = CREDITO, 203 = ALTRO PAGAMENTO, 204 = BANCOMAT, 301 = TICKET

		FP81II, FP81 and FP90 ver 2.01 is TRUE)
fiscal-printer	<i>cashPOSID</i>	Printer ID (001 – 999)
fiscal-printer	<i>trailerFileName</i>	Add the name of the file with the complete path
fiscal-printer	<i>printerCodePage</i>	Name of the Code Page to use (for ex. "Cp437" = MS_DOS United States,Australia,New Zealand,South Africa - "Cp737" = PC Greek - "Cp866" = PC Georgian)
fiscal-printer	<i>countryCode</i>	01 = Italy 02 = Turkey 03 = Greece 04 = Georgia
fiscal-printer	<i>ejFileName</i>	Path of the file to save the EJ after a Zreport (only for Greece)
fiscal-printer	<i>fiscalLogo</i>	Fiscal Logo (only for Greece)
fiscal-printer	<i>printQuantityIfOne</i>	<i>true</i> = the driver prints the quantity line (before an item) even if is 1. <i>false</i> = the driver does not print the quantity line if is 1.
fiscal-printer	<i>debugCFileName</i>	Name of the file with complete path to save the trace dedicated to the C library (from V29)
electronic-journal	<i>printerCodePage</i>	Name of the Code Page to use (for ex. "Cp437" = MS_DOS United States,Australia,New Zealand,South Africa - "Cp737" = PC Greek - "Cp866" = PC Georgian)
Electronic journal	<i>pollStatus</i>	<i>true</i> = the driver manage a regular polling to the printer in order to generate event in case of changing of devices status. <i>false</i> = the driver does not manage the printer polling.
ALL	<i>debugFileName</i>	Name of the file with complete path to save the trace (from V29)
ALL	<i>debugFileLength</i>	Size of the file used for the trace (from V29)

## 5 Limitation of the driver

<b>Service</b>	<b>method / property</b>	<b>limitation</b>
line-display cash-drawer fiscal-printer electronic-journal	<i>CheckHealth</i>	No control is done on the devices
line-display cash-drawer fiscal-printer electronic-journal	<i>CheckHealthText</i>	Return a fixed string
line-display	<i>DeviceBrightness</i>	Set does not works
fiscal-printer	<i>FiscalReceiptStation</i>	Available only RECEIPT
fiscal-printer	<i>FiscalReceiptType</i>	Available only SALES and REFUND
fiscal-printer	<i>AdditionalHeader</i>	The content of the string is lost to the first fiscal closure following the property setting. From V28 the lines are up to 9.
fiscal-printer	<i>AdditionalTrailer</i>	The content of the string is lost to the first fiscal closure following the property setting. The lines are up to 99.
fiscal-printer	<i>SetTrailerLine</i>	The lines are lost following the closure of the driver. From V28 the lines are saved in a txt file. To define the file set the JPOS.XML file in the property: "trailerFileName". If it is not needed to save the file, pls leave empty this property in the JPOS.XML file.
fiscal-printer	<i>BeginFiscalReceipt</i>	The <i>print-header</i> parameter is not used
fiscal-printer	<i>EndFiscalReceipt</i>	The <i>print-header</i> parameter is not used
fiscal-printer	<i>PrintRecItem</i>	The <i>price</i> parameter is not used if the unit price is different from NULL (the amount is computed from the fiscal printer multiplying the unit price and the quantity)
fiscal-printer	<i>PrintRecVoidItem</i>	The <i>adjustment</i> and <i>adjustment-type</i> are not used
fiscal-printer	<i>PrintRecTotal</i>	The <i>total</i> parameter is not used (amount is computed from the

		printer) if the option check-total is not enabled.
fiscal-printer	<i>PrintRecSubtotal</i>	The <i>amount</i> parameter is not used (the amount is computed from the printer) if the option check-total is not enabled.
fiscal-printer	<i>PrintNormal</i>	The <i>station</i> parameter must be set to RECEIPT
fiscal-printer	<i>GetData</i>	The following parameters are managed: FIRMWARE, PRINTER-ID, CURRENT_TOTAL, DAILY_TOTAL, GRAND_TOTAL, MID_VOID, RECEIPT_NUMBER, REFUND, FISCAL_REC, FISCAL_REC_VOID, NONFISCAL_REC, Z_REPORT, FISCAL_DOC, FISCAL_DOC_VOID, DESCRIPTION_LENGTH, NOT_PAID
fiscal-printer	<i>GetDate</i> <i>DateType</i>	The property <i>date-type</i> can be set to the value RTC
fiscal-printer	<i>GetTotalizer</i> <i>TotalizerType</i>	The property <i>totalizer-type</i> can be set to the value GRAND and DAY. The parameter <i>opt-args</i> can be set to the value ITEM, DISCOUNT, REFUND, ITEM_VOID, GROSS, NET
fiscal-printer	<i>SetPOSID</i>	The two parameters can be input up to 3 chars for each one, from 000 to 999. Set to 0 to disable.

## 6 How to use *Direct-IO*

The method *direct-IO* gives to the application software the possibility to use the native commands of the fiscal printer.

Using the *direct-IO* method can generate problem to the UPOS driver, the status of the printer can be changed without the control of the driver.

To use the *direct-IO* method please refer to the Fiscal Printer communication protocol.

parameter	input	output
command	0	-
data	4 figures: first figure represent the H1 parameter while the other remaining 3 figures represent the parameter H2 (see the PDU protocol)	4 figures: first figure represent the H1 parameter while the other remaining 3 figures represent the parameter H2 (see the PDU protocol). The value 0 represent an ERROR.
obj	String to send to the printer	String with the reply from the printer, if data = 0 the content of the string give the ERROR CODE.

## 7 RT printer specific commands

RT printers have specific commands for RETURN and VOID receipts, that must be sent using DirectIO().

Below the list of commands to use:

- H1=1; H2=138 – RT status
- H1=9; H2=205 – Check document presence for refund and void receipts
- H1=1; H2=078 – Open return and void receipts
- H1=2; H2=050 – Reading return and void total and grand total

In the installation folder, you can find some examples of using these commands, with source code (see "SAMPLE" folder).

Other RT printers peculiarities:

- CapPredefinedPaymentLines property must be set to TRUE, using the SetupPOS application.

PrintRecTotal "description" parameter must contain the index of one of the fiscal printer's predefined payment descriptions (see note on page 15)

- before printing any fiscal document, it's required to set the VAT table, using SetVatValue and SetVatTable methods

- descriptive lines up to 38 characters are accepted within fiscal receipt, but after the 25<sup>th</sup> character a line feed is performed by the printer

- the receipt number, "zzzz-nnnn", is composed of:

zzzz = number of daily closures + 1

nnnn = receipt progressive number

## 8 JAVA POS DRIVER

Java-POS driver ([www.javapos.com](http://www.javapos.com)) has been development for PC environment.

Following is reporting the compatibility environment:

<b>software</b>	<b>version</b>
Linux	red-hat 7.2+ (kernel 2.4+)
Java-POS	1.11
JCL (JPOS Configuration & Loader)	2.2+
JVM (Java Virtual Machine)	Sun JRE 1.5+
firmware FP-90 – any ver. for FP90II, F81, FP90III, FP81II	2.0+

### 8.1 Java-POS driver Installation and configuration for LINUX

The Java-POS driver for Linux O.S. and for serial Epson fiscal printer needs the following files:

- *libepsonDriver.SO*
- *epsonCashPRJ.JAR*

The file *libepsonDriver.SO* can be copied in any folder of the LINUX OS: it is needed that the path where the *libepsonDriver.SO* has been saved must be assigned to the environment variable using LD\_LIBRARY\_PATH.

The file *epsonCashPRJ.JAR* can be saved in any folder: it is needed that the path where the *epsonCashPRJ.JAR* file has been saved must assigned in the CLASSPATH of the Java-POS application.

## 8.2 Java-POS driver Installation and configuration for Window

The Java-POS driver for Windows O.S. and for Epson fiscal printer needs the following files:

- *EFIO.dll*
- *EFIOEthernet.dll*
- *EFIOSerial.dll*
- *EFIOUSB.dll*
- *epsonCashPRJ\_Vnnn.jar*
- *epsonDriverVnnn.dll*
- *IOModule.dll*
- *IOModuleSetting.xml*
- *LogManager.dll*
- *SEFIO.dll*

Copy the above file in the same folder where there is the application.

## 9 POS for .net driver

The POS for .net driver needs that the following environment has to set in advance:

- Windows XP professional or WEPOS
- Microsoft framework 2.0

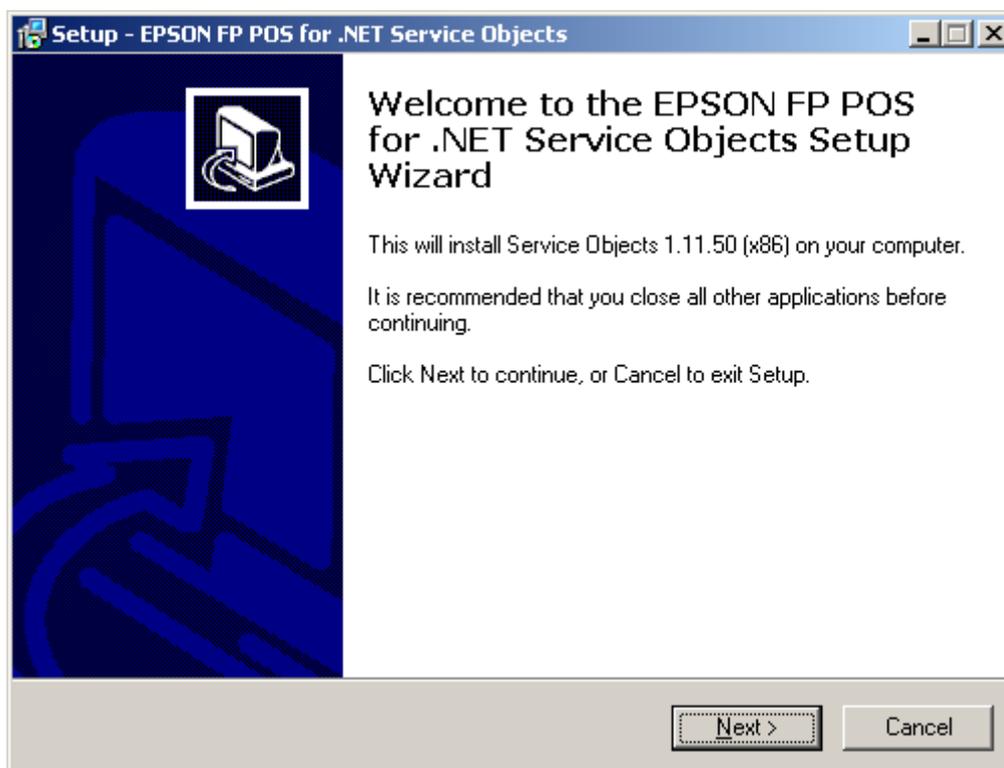

Following the installation of the environment, run the setup program:

### **Epson\_FP\_NET\_ADK\_111\_Vnnn\_x86.exe**

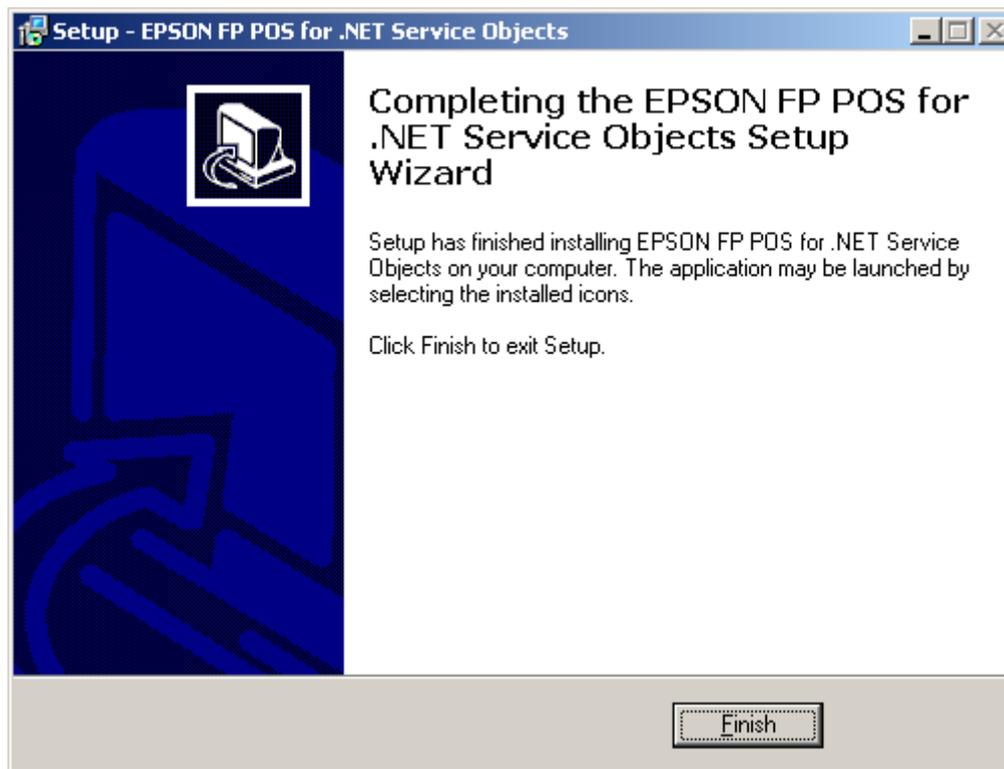

Select the language selecting between Italian or English one

Select the folder where the driver has to be installed.

Follow the instructions and at the end click to finish to complete the installation.

The following files have been saved in the selected folder:

Nome ^	Dimensione
Manual	
Samples	
TMUSB610a	
EFIO.dll	280 KB
EFIOEthernet.dll	148 KB
EFIOSerial.dll	160 KB

## 10 OPOS driver

The OPOS driver needs that the following environment has to set in advance:

- Windows XP professional or WEPOS

Following the installation of the environment, run the setup program:

### **Epson\_FP\_OPOS\_ADK\_111\_Vnnn\_x86.exe**

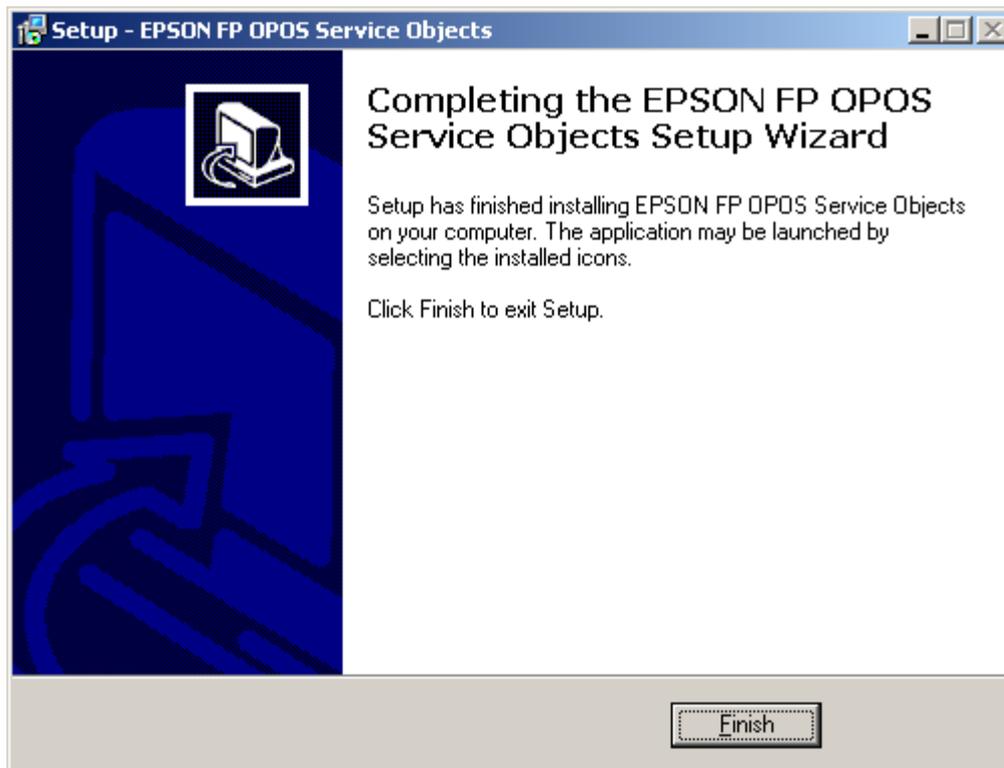

Select the language selecting between Italian or English one

Select the folder where the driver has to be installed.

Follow the instructions and at the end click to finish to complete the installation.

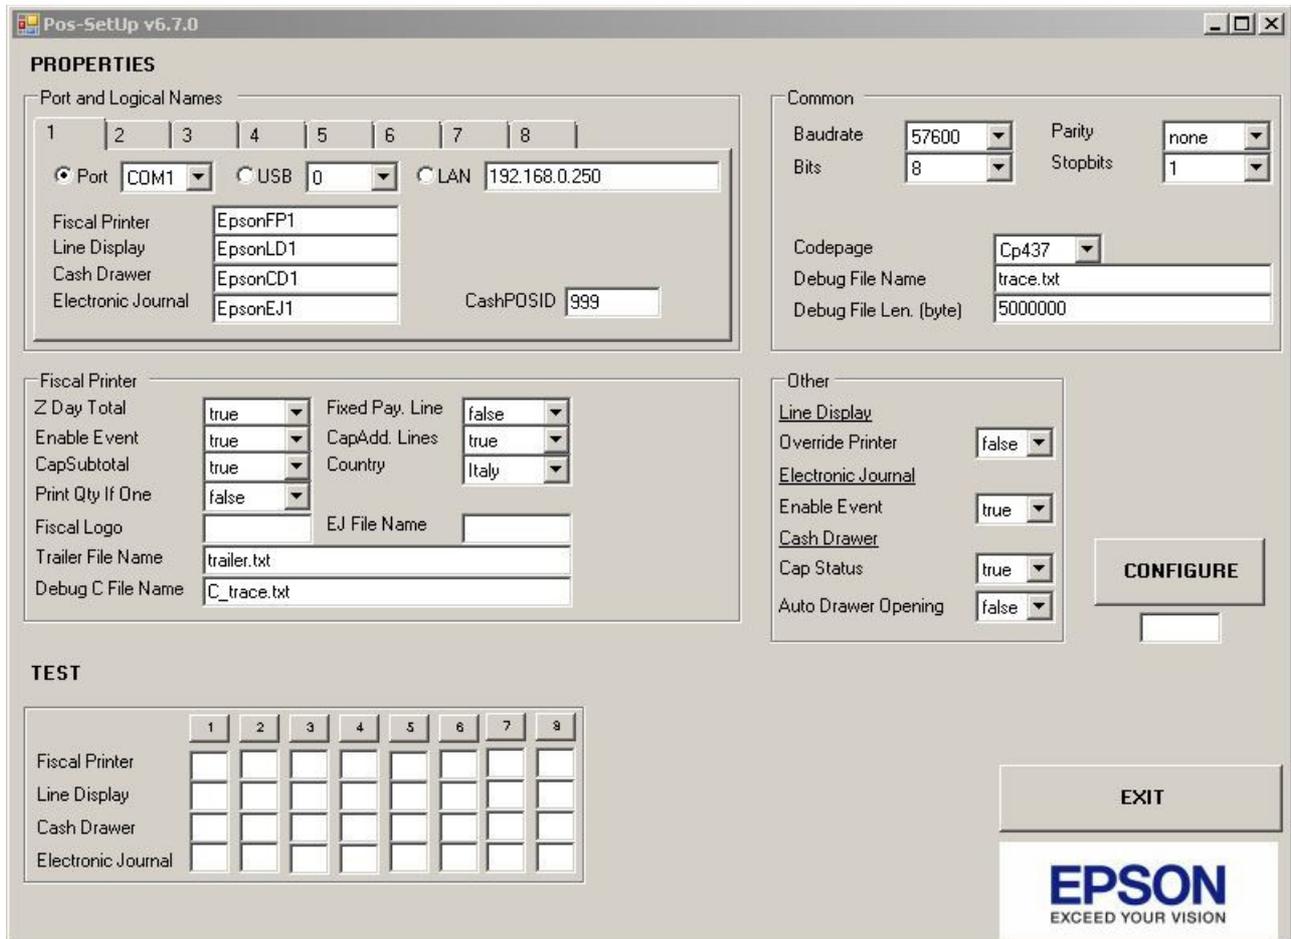

The following files have been saved in the selected folder:

## 11 How to set and test POS for .net and OPOS driver

To set jpos.xml and test that the driver has been installed correctly, see the following instructions:

- Connect the serial/usb/tcp cable from fiscal printer
- Run the program: Pos-SetUp

- Configure the JPOS.XML file
  - Port and Logical Names (driver can manage until 8 fiscal printers and related devices for POS for .net, only 1 for OPOS):
    - Port (serial/usb/tcp)
    - Configure the logical names saved in registry
    - Cash POS ID
  - Common properties
    - Baudrate (if serial port)
    - Parity (if serial port)
    - Bits (if serial port)
    - Stopbits (if serial port)
    - Codepage

- Debug File Name
  - Debug File Length
- Fiscal Printer properties:
  - Z Day Total
  - Fixed Pay. Line
  - Enable Event
  - Cap Add. Lines
  - Cap Subtotal
  - Country
  - Print Quantity If One
  - Fiscal Logo
  - EJ File Name
  - Trailer File Name
  - Debug C File Name
- Line Display properties:
  - Override Printer
- Electronic Journal properties:
  - Enable Event
- Cash Drawer properties:
  - Cap Status
  - Auto Drawer Opening
- Press CONFIGURE to confirm the properties and the logical names
- Press TEST button to open, claim and enable the devices (Fiscal Printer, Cash Drawer, Line Display, Electronic Journal) – ONLY for POS for .net (does not work in OPOS)

## 12 Driver error code

## 13 Software Rev. History

---

DATA : 25/04/2005

RELEASE : 0.6

AUTORE : C. Radaelli

- ++ secondo rilascio utilizzando lo schema con file VERS.H modificato nel file la gestione della lettura rel. della FP90 che con la rel. 2.01 la SUBREL è passata nella stringa della lettura stato x.yyy

---

DATA : 21/05/2005

RELEASE : 0.7

AUTORE : C. Radaelli

- != risolto problema delle exception con errore esteso e cambiato errore OFF\_LINE in fine carta
- ++ aggiunto programmazione time out A15-6 della FP90
- != cambiato valori time\_out risposta dalla FP90 e CTS (aumentati)

---

DATA : 27/05/2005

RELEASE : 0.8

AUTORE : C. Radaelli

- != dopo 90 PrintRecMessage() restituiva errore, mancava reset contatore linee al termine della chiusura scontrino e reset printer, modificato epsonDriver.C

---

DATA : 10/06/2005

RELEASE : 0.9

AUTORE : C. Radaelli

- != reset PreLine e PostLine, release mai distribuita

---

DATA : 27/06/2005

RELEASE : 0.A

AUTORE : C. Radaelli

- ++ routine ResetPrinter() ammesso VOID scontrino a pagamento iniziato
- ++ aggiunto flag per disattivare ACK comunicazione PC
- ++ TIME OUT FAST per printRecMessage (errore su PrintRecMessage, ridotto Time out)

---

DATA : 30/06/2005

RELEASE : 0.B

AUTORE : C. Radaelli

- != spostato il reset del contatore linee della REC MESSAGE (message\_line\_count) dalla routine EndFiscalReceipt e ResetPrinter a BeginFiscalReceipt()
- ++ aggiunto lettura stato in EndFiscalReceipt in caso di stato MONITOR il metodo ritorna O fino alle release precedenti alla 3.0 in caso di fine carta su pagamento o fine scontrino la stampante ritorna ERRORE ma chiude lo scontrino dopo il cambio carta

---

DATA : 08/07/2005

RELEASE : 0.C

AUTORE : G. Meini

- ++ inserito ritardo nel metodo JPOS PrintRecTotal, release utilizzata a solo scopo di DEBUG

---

DATA : 10/08/2005

RELEASE : 1.0

AUTORE : G. Meini

- != unificate le versioni Linux e Windows
- != modificata gestione dalla versione del firmware della stampante FP90
- ++ aggiunta possibilità di utilizzare il metodo JPOS PrintNormal all'interno dello scontrino fiscale
- != variazione implementazione metodo JPOS resetPrinter
- != modificata lettura parametro COM-port da file XML di configurazione

---

DATA : 16/09/2005

RELEASE : 1.1

AUTORE : G. Meini

- != abilitata operazione di "correzione" metodo JPOS PrintRecVoidItem
- != corretto calcolo importo metodo JPOS PrintRecVoidItem

---

DATA : 20/09/2005

RELEASE : 1.2

AUTORE : C.Radaelli

- != modificato valore minimo rel. da 2012 a 2011 per VOID\_REC\_IN\_PAYMENT\_MIN\_SW\_REV\_NUM
- != modificato valore minimo rel. da 2020 a 2011 per END\_FISCAL\_MIN\_SW\_REV\_NUM

---

DATA : 23/09/2005

RELEASE : 1.3

AUTORE : G. Meini

- ++ ripristinato corretto funzionamento RestoreDisplay
- != correzione formattazione stringa di descrizione del pagamento
- != NO cancellazione display LCD in uscita dal driver
- != variata logica di discriminazione storno/correzione metodo JPOS printRecVoidItem

---

DATA : 02/10/2005

RELEASE : 1.4

AUTORE : C.Radaelli

- != modificata la routine resetPrinter() Case FISCAL\_REC\_END\_OPEN. Se esiste questo stato significa che la FP90 Ã in grado di gestirlo e di accettare il comando di VOID TOTALE. Nelle versioni al posto del VOID si chiudeva lo scontrino forzando il pagamento.
- != Cambiata modalita' sconto su ITEM da ultima vendita a Reparto (tipo 3)per partire con sconto negativo

---

DATA : 17/10/2005  
RELEASE : 1.5  
AUTORE : C.Radaelli

- ++ Aumentato valore TIME OUT BUSY da 3000 a 5000
- ++ Modificato Indice pagamenti da 0 a 1 valore minimo ammesso

---

DATA : 18/10/2005  
RELEASE : 1.6  
AUTORE : C.Radaelli

- Eliminato test CTS prima della trasmissione

---

DATA : 28/03/2006  
RELEASE : 1.7  
AUTORE : G.Meini

- != Ripristinato test CTS prima della trasmissione, spostato nel ciclo di retry e inserito ciclo antirimbalo segnale CTS

---

DATA : 01/04/2006  
RELEASE : 1.8  
AUTORE : G.Meini

- ++ Gestione Raw-IO come caso particolare Direct-IO per supporto stampa bitmap
- ++ Gestione tipo stampante per operazioni dipendenti dalla versione firmware

---

DATA : 06/04/2006  
RELEASE : 1.9  
AUTORE : C.Radaelli

- ++ Aggiunto CASE NON FISCAL RECEIPT OPEN nella funzione RESET di EpsonDriver.c
- != modificato PERIODICA REFUND in DAILY REFUND

---

DATA : 29/04/2006  
RELEASE : 2.0  
AUTORE : C.Radaelli

- ++ Aggiunto terminatore stringhe per compatibilità POSNET nel file epsondriver.c
- != resa pubblica public eposon.epsonCashUtil \_cDU per POSNET

---

DATA : 10/05/2006  
RELEASE : 2.1  
AUTORE : G.Meini

- ++ Gestione metodo printRecNotPaid
- ++ Gestione resi/sconti/annulli metodo getTotalizer aggiunto due nuovi terminatori per POS NET

---

-----  
 DATA : 06/07/2006  
 RELEASE : 2.3  
 AUTORE : G.Meini

- :
  - Unificazione codice Windows/linux/SCO-Unix

-----  
 DATA : 04/09/2006  
 RELEASE : 2.4  
 AUTORE : G.Meini + C RAdaelli

- ++ Implementazione maggiorazioni
- ++ aggiunto terminatori POS net per Print Normal e PricREcMessage

-----  
 DATA : 30/12/2006  
 RELEASE : 2.5  
 AUTORE : C RAdaelli

- ++ sdoppiato routine RAWIO per Linux e Windows con gestione dellaROW I/O in 3 fasi per problema COMwrite non bloccante
- ++ aggiunto gestione USB per convertitore COMUSB
- != portato numero COM max a 20
- ++ Workaround per problema NOTA DI CREDITO, si intercetta l'additional header "PRATAICA DI RESO" e si evita l'apertura dello scontrino, in questo modo la NC è stampata correttamente
- Eliminati controlli CTS e relativo time out prima della TX, il tutto è lasciato al S.O.

-----  
 DATA : 19/01/2007  
 RELEASE : 2.6  
 AUTORE : C RAdaelli

- != rilasciato V26 per maggiore omogenità tra POS for .net e JPOS

-----  
 DATA : 19/01/2007  
 RELEASE : 2.7  
 AUTORE : C Radaelli

- != Workaroubd per problema GetCurrentTotal, durante i pagamenti restituiva la parte da pagare

-----  
 DATA : 20/04/2007  
 RELEASE : 2.8  
 AUTORE : AM

- ++ aggiunta la gestione di un file .txt, in cui vengono salvate le trailer lines (max 9 linee).
- Nel file jpos.xml è stato aggiunto il parametro "TrailerFileName", dove deve essere indicato il path completo del file in cui salvare le trailer lines (se non si vogliono salvare basta lasciare il parametro vuoto "").
- Ogni volta che viene effettuato l'Open della stampante, viene verificata la presenza del file e, in caso positivo, vengono lette e memorizzate le linee contenute. Quando invece viene mandato il comando setTrailerLine, la stringa viene salvata nel file (quella "vecchia" Ã" sovrascritta).
- Pe evitare l'introduzione di un nuovo filone di errori, non viene effettuato alcun controllo su apertura, lettura e scrittura del file stesso.
- modificato il metodo setAdditionalHeader per permettere la stampa di più additional header (max 9 linee). Va inviata un'unica stringa suddivisa in più sottostringhe separate da un cr o un lf.
- aggiunta la funzione per il settaggio del POS ID (numero cassa) attraverso il comando setPOSID. Del metodo setPOSID viene utilizzato solo il primo parametro, che deve essere di tipo numerico e di max 3 cifre. Se non si volesse stampare il numero di cassa basta inviare setPOSID("0", "0").
- reintrodotta il loop di attesa per evitare hang in scrittura porta (nel metodo FP90\_SendReceive).
- Aggiunto le seguenti proprietà e eventi:
  - **CapPowerReporting** = PR\_STANDARD (solo per FiscalPrinter).

- **PowerNotify** = è possibile effettuare il settaggio (solo per FiscalPrinter), perchè CapPowerReporting = PR\_STANDARD
- **PowerState** = può assumere i valori PS\_UNKNOWN (se FiscalPrinter è disabled o se PowerNotify è PN\_DISABLED), PS\_ONLINE (se FiscalPrinter è enabled, se PowerNotify è PN\_ENABLED e se la stampante risponde correttamente al polling), PS\_OFF\_OFFLINE (se FiscalPrinter è enabled, se PowerNotify è PN\_ENABLED e se la stampante va in timeout sul polling).
- **StatusUpdateEvent** = introdotta la gestione degli eventi SUE\_POWER\_ONLINE e SUE\_POWER\_OFF\_OFFLINE (solo per FiscalPrinter)

-----  
 DATA : 07/10/2007  
 RELEASE : 2.9  
 AUTORE : AM

- aggiunta gestione trace sia di basso livello che per la parte java

-----  
 DATA : 047/110/2007  
 RELEASE : 3.0  
 AUTORE : AM

- corretto bug stop driver per trace full e bug gestione trailer line quando si cambia il contenuto

-----  
 DATA : 05/03/2008  
 RELEASE : 3.2  
 AUTORE : SR

- ++ aggiunto metodo GetPrinterStateThread in eponCashUtil per distinguere le chiamate effettuate dal thread
- ++ aggiunto metodo GetRecJrnStateThread in eponCashUtil per distinguere le chiamate effettuate dal thread
- ++ aggiunto metodo GetCashDrawerStatusThread in eponCashUtil per distinguere le chiamate effettuate dal thread
- != sostituito il metodo getCashDrawerStatus in cashDrawerService con quello specifico per le chiamate dal thread
- ++ aggiunta gestione code response -100 del metodo getCashDrawerStatusThread in cashDrawerService
- != portato il thread sleep a 1500 in cashDrawerService
- != sostituito il metodo GetPrinterState con quello specifico per le chiamate dal thread in fiscalPrinterService
- != sostituito il metodo GetRecJrnState con quello specifico per le chiamate dal thread in fiscalPrinterService
- != portato il thread sleep a 1500 in fiscalPrinterService
- ++ aggiunto metodo GetPrinterStateThread per distinguere le chiamate effettuate dal thread in eponDriver
- ++ aggiunto metodo GetRecJrnStateThread per distinguere le chiamate effettuate dal thread in eponDriver
- ++ aggiunto metodo getCashDrawerStatusThread per distinguere le chiamate effettuate dal thread in eponDriver

  - ++ aggiunto metodo EndRemoval (FiscalPrinter, perchè è stata aggiunta la gestione della Slip e dei Fiscal Document) in eposnDriver
  - ++ aggiunto metodo EndFiscalDocument (FiscalPrinter, perchè è stata aggiunta la gestione della Slip e dei Fiscal Document) in eposnDriver
  - ++ aggiunto metodo GetFiscalDocNumber (FiscalPrinter, perchè è stata aggiunta la gestione della Slip e dei Fiscal Document) in eposnDriver
  - ++ aggiunto metodo GetFiscalDocVoidNumber (FiscalPrinter, perchè è stata aggiunta la gestione della Slip e dei Fiscal Document) in eposnDriver
  - ++ aggiunta la property printQuantityIfOne (stampa la quantità prima di un articolo anche se = 1)
  - ++ aggiunta la stampa della quantità, nel metodo printRecltem, anche = 1 (solo se printQuantityIfOne è true)
-

DATA : 31/07/2009  
RELEASE : 3.9  
AUTORE : SR

- != set default printer type to 0 (FP90), because 255 (UNKNOW) gives errors
- != set cashPOSID (fiscal printer number) to 3 characters (000)

---

DATA : 31/08/2009  
RELEASE : 4.0  
AUTORE : SR

- != modified test version level in reset command
- != temporary suspended fiscal documents control (in DayOpened)

---

DATA : 01/10/2009  
RELEASE : 4.1  
AUTORE : SR

- != modified Pos-SetUp

---

DATA : 19/10/2009  
RELEASE : 4.2  
AUTORE : SR

- != modified Pos-SetUp

---

DATA : 13/11/2009  
RELEASE : 4.3  
AUTORE : SR

- != modified Pos-SetUp

---

DATA : 20/01/2010  
RELEASE : 4.4  
AUTORE : SR

- != modified Pos-SetUp
- ++ added in OpenPrinterDriver CoverOpen/RecEmpty error
- ++ added Get Printer Information (1079) command in OpenPrinterDriver for international printer type
- != fixed bug in GetRecJrnStateThread

---

DATA : 12/04/2010  
RELEASE : 4.5  
AUTORE : SR

- != modified Pos-SetUp
- != modified bitmap buffer dimension
- != modified serviceObjectVersion (1.11.2)
- != fixed some EJ properties problem
- != fixed ResultCodeExtended problem

---

DATA : 27/04/2010  
RELEASE : 4.6  
AUTORE : SR

- != modified Pos-SetUp
- != fixed serial port connection problem

---

DATA : 02/09/2010  
RELEASE : 4.7  
AUTORE : SR

- != modified Pos-SetUp
- ++ manages 4 devices for any type (4 Fiscal Printer, 4 Line Display, ...)
- ++ manages line feed (\n) on method PrintRecMessage

- != method PrintRecMessage can be used even if receipt's total is negative
- != electronic journal property Claimed return correct value
- -- no automatic drawer opening command added in Cash Drawer opening (deleted from Fiscal Printer)
- ++ compatibles with 64-bit systems, but the application must be compiled to x86 (NOT x64)

---

DATA : 13/10/2010  
RELEASE : 4.8  
AUTORE : SR

- != modified Pos-SetUp
- ++ manages 8 devices for any type (8 Fiscal Printer, 8 Line Display, ...)
- ++ added control on fiscal printer power state (on/off)

---

DATA : 16/11/2010  
RELEASE : 4.9  
AUTORE : SR

- != modified Pos-SetUp
- ++ added the following fixed payment definition: CREDIT, OTHER and BANCOMAT
- ++ added the configuration of CREDIT description in the FPxx (Italian version)

---

DATA : 03/03/2011  
RELEASE : 5.0  
AUTORE : SR

- != modified Pos-SetUp
- ++ added "neutral" driver for JavaPos only (epsonDriverV50)
- != set cash index to 0 in case of fixed payment

---

DATA : 11/05/2011  
RELEASE : 5.2  
AUTORE : SR

- != in case of error 33, GetFiscalDayState return true

---

DATA : 07/07/2011  
RELEASE : 5.3.0  
AUTORE : SR

- != introduced new dll SEFIO (x Epuras)

---

DATA : 30/09/2011  
RELEASE : 6.0.0  
AUTORE : SR

- != introduced new dll SEFIO (for dll Eflo)

---

DATA : 09/11/2011  
RELEASE : 6.1.0  
AUTORE : SR

- ++ added 2 new printers (FP90III and FP81II)
- != increased timeout for GetEJData command
- ++ in case of Tcp connection, if a power off / power on is occurred, a retry of last command must be done
- != in case of Tcp connection, if first command after open port return an exception (printer is power off), a close port is done

---

DATA : 23/12/2011  
RELEASE : 6.2.0  
AUTORE : SR

- != added time-out (15 sec) and stopped polling after a Z report (for Greece)

- != sales post line (for Greece) is sent before sale command

-----  
DATA : 21/05/2012  
RELEASE : 6.3.0  
AUTORE : SR

- != max number of additional trailer line is 99
- ++ added support of FPTR\_GT\_GROSS and FPTR\_GT\_NET optArgs in GetTotalizer method

-----  
DATA : 07/06/2012  
RELEASE : 6.4.0  
AUTORE : SR

- != deleted control of trailer line's max num. in method RecMessage()
- != in RecMessage() trailer line's counter is incremented only if command 1078 it's type 2

-----  
DATA : 26/07/2012  
RELEASE : 6.5.0  
AUTORE : SR

- != changed MAX\_PRICE test, deleted 2 decimals, test on price/100

-----  
DATA : 16/10/2012  
RELEASE : 6.6.0  
AUTORE : SR

- != fix download graphics problem (sent only first bytes' packet)
- ++ added GetPrinterStateThread control for Fiscal Document (invoice)
- != changed EndFiscalRec timeout (15000 ms, was 8000 ms)

-----  
DATA : 03/12/2012  
RELEASE : 6.7.0  
AUTORE : SR

- ++ added autoDrawerOpening property (in jpos.xml) and its management to setting automatic drawer opening

-----  
DATA : 01/02/2013  
RELEASE : 6.8.0  
AUTORE : SR

- ++ added management of "free" description in fixed payments

-----  
DATA : 20/02/2013  
RELEASE : 6.9.0  
AUTORE : SR

- != fixed bug on Sefio driver

-----  
DATA : 20/05/2013  
RELEASE : 7.0.0  
AUTORE : SR

- != added character "-" if totalizer is negative (methods GetTotalizer() and GetData())
- != for printer model FP90III and FP81III the DescriptionLength is 38 and the MessageLength is 46

-----  
DATA : 28/05/2013  
RELEASE : 7.1.0  
AUTORE : SR

- != modified management of PrintRectemAdjustment() (discount/surcharge is on last item sold, not on the plu)

-----  
DATA : 02/10/2013  
RELEASE : 7.3.0  
AUTORE : SR

- != fixed the bug on opening/closing different devices
- != fixed the bug on C trace
- != fixed the bug on trailer file

---

DATA : 14/05/2014  
RELEASE : 7.4.0  
AUTORE : SR

- != fixed the bug on PrintRecMessage in case of credit note
- != added new management of fixed payment (double index)
- != fixed the bug on line display, sending Euro character
- != modified flow control type (RTS/CTS)
- != changed IoModuleSetting.xml file
- != changed Efiio files
- != fixed the bug on set header line, with FP90III and FP82II (max 40 characters)
- != fixed the bug on total item (getTotalizer), set 4 decimals (was 2)
- != fixed the bug on line display, exception no service when printer is online
- != fixed the bug on printer buffer after a printer timeout (clean printer buffer)
- != fixed the bug on "autoDrawerOpen" property, in case jpos.xml doesn't contain its line

---

DATA : 13/02/2015  
RELEASE : 7.5.0  
AUTORE : SR

- != fixed the bug on EJ query content, with FP90III and FP82II (46 characters returned)
- != disabled Pos-SetUp test button in Opos driver

---

DATA : 16/09/2015  
RELEASE : 7.6.0  
AUTORE : SR

- != modified setVatValue() method, added formatting of second argument (percentage vat value)

---

DATA : 23/11/2015  
RELEASE : 7.7.0  
AUTORE : SR

- != modified waitForDrawerClose() method, changed timeout management (method returns immediately when drawer is closed)

---

DATA : 22/12/2015  
RELEASE : 7.8.0  
AUTORE : SR

- != modified setTrailerLine() method, verified Description parameter (if null set to "")

---

DATA : 07/11/2016  
RELEASE : 7.9.0  
AUTORE : SR

- != increased the max number of italian VAT rates to 9, for printers and FW that support it
- != increased to 10 the number of devices that the driver can handle (only for Javapos and DotNet)

---

DATA : 24/01/2017  
RELEASE : 8.0.0 (only for JavaPos)  
AUTORE : AMR

---

DATA : 24/07/2017  
RELEASE : 8.1.0 (only for JavaPos)  
AUTORE : AMR

---

DATA : 21/08/2017  
RELEASE : 8.1.1 (only for JavaPos)

AUTORE : AMR

---

DATA : 02/03/2018  
RELEASE : 8.1.2 (only for JavaPos)  
AUTORE : AMR

---

DATA : 17/05/2018  
RELEASE : 8.1.4  
AUTORE : SR

- != updated Efiio library

---

DATA : 10/01/2019  
RELEASE : 8.1.5  
AUTORE : SR

- != added management of RT printers model

---
