Charging the Battery

Battery Charging Precautions

- At the time of purchase you need to connect it to the computer with the USB cable. The battery is not fully charged. Make sure you charge the battery before you run the scanner using the battery.
- The battery slowly runs down even when you do not use the scanner. Charge the battery before you run the scanner using the battery.
- If you do not use the scanner for a long time, charge the battery once every six months on a regular basis to avoid letting it run out.
- We recommend turning off the scanner when not in use to save the battery. You can also set the scanner to turn off automatically after a specified period of time.
- The battery's usable time is shorter in low temperature environments, even if you have charged the battery fully.
- You do not need to wait for the battery to run out before charging it.
- The battery may be hot right after it is charged or used; this is normal.
- The battery cannot be charged or the battery may deteriorate if you charge it in low or high temperatures. Charge the battery within the guaranteed charging temperature range (8 to 35 °C (46 to 95 °F)).

Network Settings

Network Connection Types

You can use the following connection methods.

Wi-Fi Connection

Connect the scanner and the computer or smart device to the wireless router. This is the typical connection method for home or office networks where computers are connected by Wi-Fi through the wireless router.

Related Information

- ➔ [“Connecting to a Computer” on page 19](#)
- ➔ [“Making Wi-Fi Settings from the Control Panel” on page 20](#)

Wi-Fi Direct (Simple AP) Connection

Use this connection method when you are not using Wi-Fi at home or at the office, or when you want to connect the scanner and the computer or smart device directly. In this mode, the scanner acts as a wireless router and you can connect the devices to the scanner without having to use a standard wireless router.

Network Settings

The scanner can be connected by Wi-Fi and Wi-Fi Direct (Simple AP) connection simultaneously. However, if you start a network connection in Wi-Fi Direct (Simple AP) connection when the scanner is connected by Wi-Fi, the Wi-Fi is temporarily disconnected.

Related Information

➔ “Making Wi-Fi Direct (Simple AP) Connection Settings” on page 22

Connecting to a Computer

We recommend using the installer to connect the scanner to a computer. You can run the installer using one of the following methods.

- Setting up from the website

Access the following website, and then enter the product name.

<http://epson.sn>

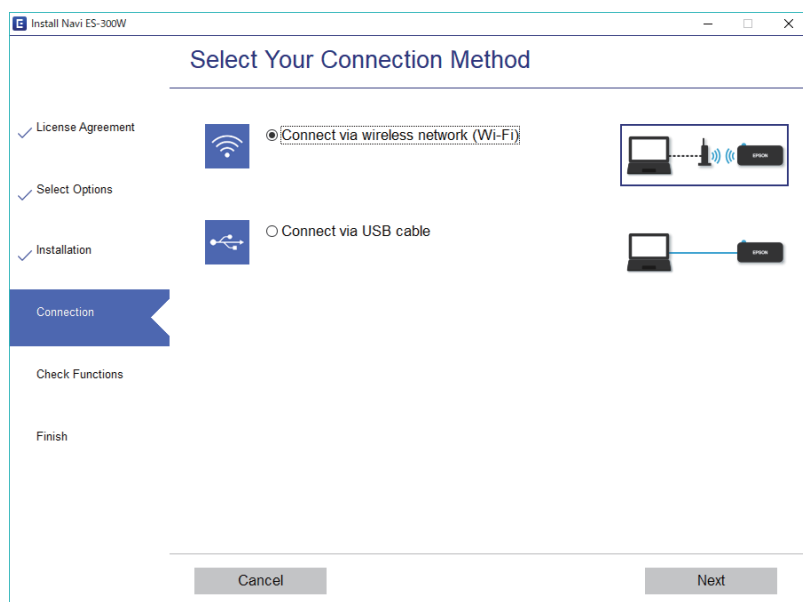

Go to **Setup**, and then click **Download** in the download and connect part. Click or double-click the downloaded file to run the installer. Follow the on-screen instructions.

- Setting up using the software disc (only for the models that come with a software disc and users with computers with disc drives.)

Insert the software disc into the computer, and then follow the on-screen instructions.

Selecting the Connection Methods

Follow the on-screen instructions until the following screen is displayed, and then select the method for connecting the scanner to the computer.

Select the connection type and then click **Next**. Follow the on-screen instructions.

Making Settings for Connecting to the Smart Device

You can use the scanner from a smart device when you connect the scanner to the same Wi-Fi network (SSID) as the smart device. To use the scanner from a smart device, access the following website, and then enter the product name. Go to **Setup**, and then start setting up.

<http://epson.sn>

Access to the website from the smart device that you want to connect to the scanner.

Making Wi-Fi Settings from the Control Panel

You can make network settings from the scanner's control panel. After connecting the scanner to the network, connect to the scanner from the device that you want to use (computer, smart phone, tablet, and so on.)

Making Wi-Fi Settings Using Push Button Setup (WPS)

You can automatically set up a Wi-Fi network by pressing a button on the wireless router. If the following conditions are met, you can set up by using this method.

- The router is compatible with WPS (Wi-Fi Protected Setup).
- The current Wi-Fi connection was established by pressing a button on the router.

1. Make sure that the scanner is turned on.
2. Set the  switch on the scanner to on.
3. Hold down the WPS button on the router until the security light flashes.

**Important:**

You must complete Wi-Fi connection setup within two minutes.

Network Settings

If your router does not have a WPS button, see your router documentation for instructions on enabling WPS in your router's software.

4. Hold down the  button on the scanner until the Ready light flashes, and  and  lights flash alternately (approximately 3 seconds).

When the Ready light,  and  lights stay on, connection is complete.

Note:

Connection has failed when the Ready light stays on,  and  lights flash simultaneously. Restart the scanner and the router, move them closer together, and then try again.

1. Make sure that the scanner is turned off.
2. Set the  switch on the scanner to on.
3. Slide the  switch while holding down the  button and hold them there for approximately 10 seconds until the ready light flashes to turn on the scanner.

Important:

You must complete Wi-Fi connection setup within two minutes.

4. Use your computer to enter the PIN code (an eight-digit number) on the label stuck to the scanner.
Connection setup starts. The Ready light flashes, and the  and  lights on the scanner flash alternately.
When the Ready light,  and  lights stay on, connection is complete.

Network Settings

Note:

- ❑ For details on entering a PIN code, see your router documentation for instructions.
- ❑ Connection has failed when the Ready light stays on,  and  lights flash simultaneously. Restart the scanner and the router, move them closer together, and then try again.

Making Wi-Fi Direct (Simple AP) Connection Settings

This method allows you to connect the scanner directly to devices without a wireless router. The scanner acts as a router.

 **Important:**

When you connect from a smart device to the scanner using a Wi-Fi Direct (Simple AP) connection, the scanner is connected to the same Wi-Fi network (SSID) as the smart device and communication is established between them. Since the smart device automatically connects to other connectable Wi-Fi networks when the scanner is turned off, it does not connect to the previous Wi-Fi network again when the scanner is turned on. Connect to the scanner's SSID in Wi-Fi Direct (Simple AP) from the smart device again. If you do not want to connect every time you turn the scanner on or off, we recommend using a Wi-Fi network by connecting the scanner to a router.

1. Set the  switch on the scanner to on.
2. Make sure that the scanner is turned on.
3. Connect from the smart device or computer to the scanner using the scanner's SSID and password.

Note:

- ❑ You can check the SSID and password on the label stuck to the scanner.
- ❑ It may take a few minutes for the scanner SSID to appear in the list.
- ❑ See the documentation provided with your smart device or computer for the operating instructions.

Network Problems

When You Cannot Make Network Settings

Turn off the devices you want to connect to the network. Wait for about 10 seconds, and then turn on the devices in the following order; access point, computer or smart device, and then scanner. Move the scanner and computer or smart device closer to the access point to help with radio wave communication, and then try to make network settings again.

Cannot Connect from Devices Even Though Network Settings are No Problems

If you cannot connect from the computer or smart device to the scanner even though network settings of the scanner are no problem, see the following.

Solving Problems

- ❑ When you are using multiple wireless routers at the same time, you may not be able to use the scanner from the computer or smart device depending on the settings of the wireless routers. Connect the computer or smart device to the same wireless router as the scanner.

Disable the tethering function on the smart device if it is enabled.

- ❑ You may not be able to connect to the wireless router when the wireless router has multiple SSIDs and devices are connected to different SSIDs on the same wireless router. Connect the computer or smart device to the same SSID as the scanner.

Solving Problems

- ❑ A wireless router that is compliant with both IEEE802.11a and IEEE802.11g has SSIDs of 2.4 GHz and 5 GHz. If you connect the computer or smart device to a 5 GHz SSID, you cannot connect to the scanner because the scanner only supports communication over 2.4 GHz. Connect the computer or smart device to the same SSID as the scanner.

- ❑ Most wireless routers have a privacy separator feature that blocks communication between connected devices. If you cannot communicate between the scanner and the computer or smart device even if they are connected to the same network, disable the privacy separator on the wireless router. See the manual provided with the wireless router for details.

The Scanner Suddenly Cannot Scan over a Network Connection

- ❑ When you have changed your access point or provider, try making network settings for the scanner again. Connect the computer or smart device to the same SSID as the scanner.
- ❑ Turn off the devices you want to connect to the network. Wait for about 10 seconds, and then turn on the devices in the following order; access point, computer or smart device, and then scanner. Move the scanner and computer or smart device closer to the access point to help with radio wave communication, and then try to make network settings again.
- ❑ Try accessing any website from your computer to make sure that your computer's network settings are correct. If you cannot access any websites, there is a problem on the computer. See the manual provided with your computer for more details.

The Scanner Suddenly Cannot Scan Using a USB Connection

- ❑ Disconnect the USB cable from the computer. Right-click on the scanner icon displayed on the computer, and then select **Remove Device**. Connect the USB cable to the computer and try a test scan. If scanning is possible, the setup is complete.
- ❑ Re-set the USB connection following the steps in [Changing the Connection Method to a Computer] in this manual.
- ❑ If a computer is connected to the scanner by USB while another computer is also connected to the scanner over a wireless connection and Epson Scan 2 is running on this computer, scanned images are saved to the wirelessly connected scanner when you press the scanner button. Scan from the computer instead of using the scanner button or close Epson Scan 2 on the wirelessly connected computer.
